Mölnlycke Health Care Surgical division – Fact Sheet

Our business in short

- Mölnlycke Health Care Surgical is one of two business units within Mölnlycke Health Care*.
- The Surgical Division offers operating room (O.R.) efficiency through procedure specific products, training, support and effective logistics.
- A wide range of single-use surgical products help minimize the risk of wound infections following surgery, and also protect the health care workers. Read more about BARRIER®, Biogel®, HiBi® and ProcedurePak®.
- Our O.R Efficiency Partnership Program™ is a tailor-made program that help hospitals with increased efficiency by:
  - Reducing set-up time for surgeries
  - Simplifying the ordering process
  - Easing the stock-taking process
  - Reducing waste material
As a result, hospitals are able to free up resources that can be spent on patient care, additional staff training or more surgical interventions.

Quality standard and environmental policy

Mölnlycke is committed to ensuring that all our products and services meet the highest levels of safety and efficiency. This means complying with the regulations and requirements of the markets we serve and a global management system to ensure we maintain that high standard. We work continuously to reduce our carbon emission footprint and are actively striving to improve the utilization of materials and to use waste as a source of energy.

Key figures

- 5 surgical manufacturing sites globally
- 84 countries where our surgical products are available
- 1 in 5 custom procedure trays sold in Europe is a ProcedurePak® from Mölnlycke Health Care
- 2,5 million surgical procedures per year where Mölnlycke surgical products are used

Our products

- **BARRIER®** - surgical drapes and staff clothing that provides an optimal barrier against microbial migration in all surgical procedures.
- **Biogel®** - surgical gloves aimed for double-gloving and a patented puncture indication system. If the glove gets perforated, a dark patch appears to alert the wearer. The alert decreases the risk for infections in both wearer and patient.
- **HiBi®** - antiseptics that kills all major pathogens in 15-60 seconds, protecting patients from getting hospital acquired infections after surgical procedures.
- **ProcedurePak®** - custom procedure trays containing all single-use components required for a particular surgical intervention, replacing a large number of individually packaged items.
