Mefix® is the ideal fixation for dressings, catheters and cannulae.

**Nonwoven Polyester Fabric Backing**
- Soft and elastic
- Non-absorbent

**Protection Paper**
- Easy-to-remove
- Premeasured
- Perforated split

**Polyacrylate Adhesive**
- Skin friendly
- Water based
- Solvent free
How to use Mefix®

Cut to appropriate size. Separate the two parts of the protection paper. Remove the narrower protection paper. Apply the exposed adhesive portion of Mefix®. Remove the remaining protection paper. Firmly smooth Mefix® to obtain proper adhesion.

How Mefix® works
The porous structure of the nonwoven fabric ensures air and water vapor permeability. Mefix® is stretchable, conforms well to body contours and allows body movements when in place. The fabric is non-absorbent and provides a barrier to blood and fluid. The polyacrylate adhesive has been designed to be gentle to the skin but at the same time provide secure fixation. The easy-to-remove protection paper is premeasured into four inch intervals and has a perforated split for easy removal and application.

Mefix® may be easily cut to the desired shape and size.

Benefits of Mefix®
• Skin friendly adhesive
• Provides secure fixation
• Stretchable, conformable fabric backing provides barrier to blood and fluid
• Premeasured release paper allows for convenient measurement and cutting
• May be applied over flexing areas such as neck, elbows and knees
• Air permeable
• Easy-to-remove backing paper with perforated split

Areas of use
• Fixation for dressings
• Catheters
• Cannulae

Note: Care should be taken to ensure that Mefix® is not applied under tension, to prevent shearing forces causing damage to the skin. This is particularly important when applied over joints.
