Safetac® technology is a patented adhesive technology that minimizes pain to patients and trauma to wounds. Safetac® technology is available exclusively on Mölnlycke Health Care dressings, including Mepilex®, Mepitel®, Mepiform® and Mepitac®.

For more information visit www.molnlyckeUSA.com
How to use Mepilex® Ag

Clean the wound area. Cut for customization, if desired. Remove the larger release film.

Mepilex® Ag should overlap the wound bed by at least 2 cm onto the surrounding skin. Apply the adherent side to the wound. Remove the shorter release film and mold the dressing in place. Do not stretch.

Hold Mepilex® Ag securely in place with a light bandage or other dressing retention method [e.g., Tubigrip®, Tubifast®, etc.]

How to use Mepilex® Heel Ag

Clean the wound area. Cut for customization, if desired. Remove the larger release film.

Fix the dressing under the foot. Remove the shorter release film. Mold the dressing around the heel and bring edges together. Mepilex® Heel Ag should overlap the wound bed by at least 2 cm onto the surrounding skin.

Hold Mepilex® Heel Ag securely in place with a light bandage or other dressing retention method [e.g., Tubigrip®, Tubifast®, etc.]

How Mepilex® Ag dressings work

Mepilex® Ag is a soft and highly conformable antimicrobial foam dressing that absorbs exudate and maintains a moist wound environment. The Safetac® technology layer seals the wound edges, preventing the exudate from leaking onto the surrounding skin, thus minimizing the risk of maceration. The Safetac® technology layer ensures that the dressing can be changed without damaging the wound or surrounding skin or exposing the patient to additional pain.

Mepilex® Ag starts to inactivate wound related pathogens within 30 minutes with sustained effect up to 7 days. By reducing the number of microorganisms, Mepilex® Ag may also reduce odor.

Benefits of Mepilex® Ag

- Minimizes pain and trauma at dressing changes
- Stays in place allowing easy application of compression or retention bandages
- Well suited for use under compression bandages
- May be cut to suit various wound shapes and difficult-to-dress locations
- Promotes patient comfort during wear
- May remain in place for several days depending on the condition of the wound
- May be adjusted without losing its adherent properties
- Low potential for skin irritation and allergy

Wear time: Up to 7 days

Areas of use

- Moderately exuding wounds
- Leg and foot ulcers
- Pressure ulcers
- Under compression
- Graft and donor sites
- Traumatic wounds [e.g., skin tears and secondary healing wounds]
