Prepare the area: Cleanse intact skin. Dry the surrounding skin thoroughly. Ensure that skin is free of dimethicone, skin sealants, and emollients. Use of skin barrier under dressing is not necessary.

Area to protect. Assess the patient’s anatomy and evaluate if the dressing should be placed according to Figure A or B based on coverage and/or potential issues with incontinence.

After skin is prepared remove the center release film.

Hold buttock apart. Apply dressing to sacral area and into upper aspect of gluteal cleft.

Remove side release films and gently smooth each side into place.

Figure A - Product placement.

Figure B - Product placement inverted.

Customize to fit:
- Dressing may be customized and positioned to fit patient anatomy.
- Cut slits or notches in the outer edge of the border only.
- Ensure dressing conforms to the skin and avoid gaps or air pockets.

Mepilex® Border Sacrum

Benefits
- Less pain and trauma upon removal
- Uniquely designed for sacral wounds
- Easy to apply and remove
- Absorbs moderate to high amounts of exudate
- Conformable for range of motion

For Prevention

Mepilex® Border Sacrum, as part of an overall pressure ulcer prevention program, has been demonstrated to help prevent pressure ulcers, redistribute shear and friction on tissues, and maintain optimal skin microclimate during wear time. See Sacral Pressure Ulcer Prevention Considerations.

Sacral Pressure Ulcer Prevention Considerations:
- Assess patient for pressure ulcer risk.*
- If patient is at risk, apply Mepilex® Border Sacrum.
- Inspect skin under dressing daily or per facility protocol by carefully lifting the border edge and repositioning following inspection.
- Change dressing every 3 days or per facility protocol. (Dressing should be changed if rolled, soiled, saturated, displaced or compromised).
* Note: Mepilex® Border Sacrum can help to reduce impact of moisture, friction, shear and redistribute pressure when used as part of an individualized, comprehensive program of pressure ulcer prevention.

For Treatment

Mepilex® Border Sacrum is designed for a wide range of exuding wounds such as sacral pressure ulcers. May also be used on dry/necrotic wounds in combination with gels.

Patients with fecal incontinence:
- Consult with physician; consider placement of fecal containment or management device.
- Consider applying strip paste to adherent side of dressing where the foam and border meet and where dressing comes closest to anus.
- After dressing is securely in position apply liquid skin barrier to outside of Safetac® technology border and onto intact skin.
